### **Calendar Year 2022 Greenhouse Gas Emissions**

Wits Solutions Inc. (WITS) has measured and established a baseline of our greenhouse gas emissions for Calendar Year 2023 for all facilities leased and controlled by our company.

WITS' GHG emissions report provides measurement of our Scope 1 and Scope 2 emissions for CY 2023 based on cumulative data from CY 2022 and rolling average data available as of June 15<sup>th</sup> CY2023. WITS attests that the Scope 1 and 2 GHG emissions were calculated in accordance with the GHG Protocol Corporate Accounting and Reporting Standard using the official Greenhouse Gas Protocol GHG Emissions Calculations Tool in combination with data sourced from the EPA's Power Profiler via this link: <https://www.epa.gov/egrid/power-profiler#/SRVC>

In calendar year 2022, WITS' Scope 1 and 2 emissions measured approximately 3.511 metric tons CO<sub>2</sub>e. The entirety of WITS' emissions are from the electricity used in the facilities we lease, which is commercial office space, and from employee business travel and commuting. As a fully hybrid company, we produce a much smaller GHG footprint than traditional office-focused businesses. We also maintain a working presence in 35 states across the CONUS which also reduces required travel frequency and distance dramatically.

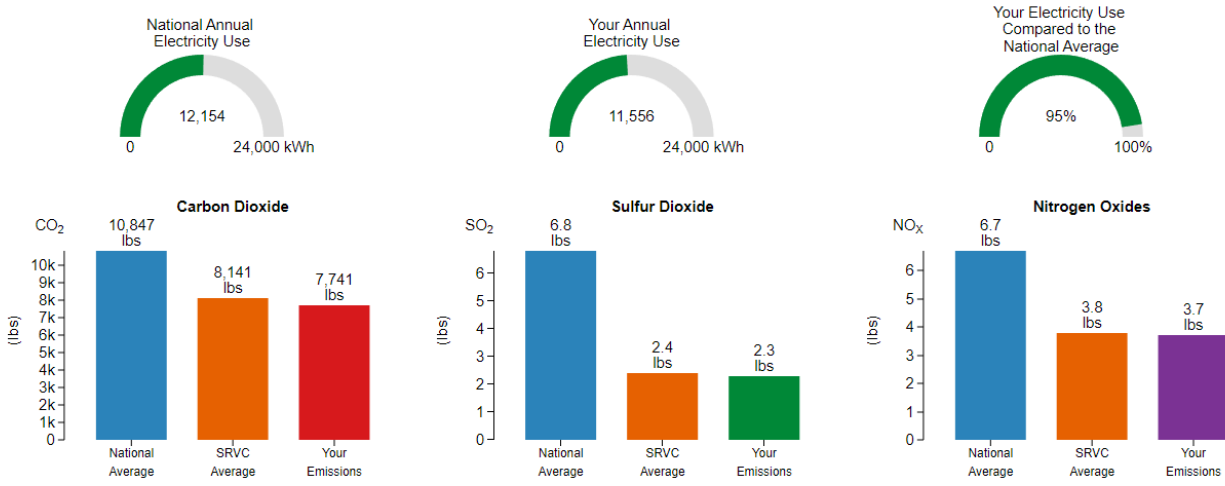

### **Reduction Targets**

WITS is committed to further reduce our greenhouse gas emissions and our impact on the climate and will continually update our established annual reduction targets beginning in 2023. We believe that establishing and meeting these short and mid-term goals will enable us to achieve a reduction in our emissions to net-zero by or before 2030.
